# PRODUCT LABEL CLAIM

“For the vaccination of healthy horses, 4 months-of-age or older, as an aid in the prevention of disease caused by rabies virus up to 14 months following vaccination”.

# Client brochure

## **Does your veterinarian recommend rabies vaccination for your horse?**

Rabies is out there: The bat in the trees, the fox on the bridge path, the skunk in the pasture, the raccoon under your trailer. And while the odds are low your horse will get rabies, the odds are virtually zero that he will recover from rabies. So why risk it? Ask your veterinarian for EquiRab™ rabies vaccine and vaccinate every year.

- **Proven effective** in horses and foals age 4 months and older.
- **Proven long-lasting** - 14-month duration of immunity.
- **Proven safe** - 97.7% reaction-free.
- **Proven convenient** - just one dose for primary immunization.

**Don't take chances with rabies.  
Ask your veterinarian for EquiRab.**
